CONCLUSION

In today's Web development, a good page design is essential. A bad design will lead to the loss of visitors and that can lead to a loss of business. In general, a good page layout hasto satisfy the basic elements of a good page design. This includes color contrast, text organization, a font selection, style of a page, page size, graphics used, andconsistency. In order to create a well-designed page for a specific audience.

The developer needs to organized and analyze the users' statistics and the background of the users. Although it can be hard to come up with a design that is well suited to all of the users, there will be a design that is appropriate for most of the audience.

The better the page design, the more hits a page will get. That implies an increase in accessibility and a possible increase in business.
